

E3: Drag reduction optimization of RAE2822

(RAE2822 翼型减阻优化)

1. Tasks

Perform optimization of reducing the wave drag of the RAE2822 (对 RAE2822 翼型进行减小波阻的优化)

2. Requirements:

- a) Minimize drag of RAE2822 airfoil under the condition of $\text{AOA} = 2.79^\circ$, $Ma=0.734$, $Re=6.5e+6$ 。The thickness of the airfoil should be maintained as the baseline, and the lift coefficient of the airfoil should not be reduced. (最小化 RAE2822 翼型的阻力, 优化工况为攻角 2.31° , 马赫数 0.729, 雷诺数 $6.4e+6$ 。翼型的厚度不能小于基准翼型的厚度, 并且翼型的升力系数不能小于基准翼型的升力系数) .
- b) Write the mathematical model of the optimization problem. (写出优化问题的数学模型)
- c) Form the optimization procedure using the provided module for prediction aerodynamic forces. (利用提供的气动力预测模块建立优化流程)
- d) Solve the optimization problem using at least one optimizer, and analyze the results. (用至少一种优化算法求解优化问题, 并分析结果)

3. Evaluation:

(1) Off-line evaluating, 70%. (线下评估)

- 1) 优化过程演示
- 2) 老师提问及回答

(2) Report evaluating, 30%. (报告评估)

- 1) 优化问题的描述和数学模型;
- 2) 优化框架和过程描述;
- 3) 优化算法的选择原因及参数调整;
- 4) 优化结果的分析。
